

Co-creation workshop 'Future skills for Bioeconomy'

Forestry

Identify the future skills and related educational needs

Transition2BIO Co-creation workshop

‘Future skills for Bioeconomy’

Forestry

14th of June 2022, 15:00 CEST/16:00 EEST Platform: Microsoft Teams

The University of Bologna, the University of Eastern Finland and the Horizon 2020 funded project Transition2BIO organise the **co-creation workshop ‘Future skills for Bioeconomy’ – Forestry**, which aims to identify the future skills and related educational needs in the European bioeconomy.

The workshop will focus on the **Forestry** sector and is the second of five co-creation workshops ‘Future skills for Bioeconomy’ focusing on different bioeconomy sectors. These workshops will be organised by Transition2BIO and the University of Bologna, together with external institutions leading each sector.

Providing the needed skills and meeting the educational needs in the European bioeconomy are key challenges for a change in our economy. The European Commission stated in its Updated Bioeconomy Strategy that *“The systemic and cross-cutting nature of new and emerging bioeconomy approaches and new value chains will need new education and skills.”*

Among its objectives, Transition2BIO will facilitate the identification of the educational and training needs towards the creation of an innovation ecosystem for the bioeconomy. The results of the co-creation workshops will be summarised in a public report and will be used for the delivery of a policy brief aimed to **inform policymakers and other stakeholders** about the issues and possible solutions to meet the identified skills and educational needs.

‘Future skills for Bioeconomy’ activities will use a **bottom-up approach** to identify and define the skills for the development of the new workforce in the bioeconomy, involving all the key stakeholders.

The participants will have the opportunity to provide their opinions and points of view on this topic, contributing to the research of the University of Bologna within the H2020 project Transition 2BIO.

During the event, the main objectives and outputs of the project will be presented, as well as the results from previous projects and initiatives on bioeconomy education. Inputs from participants will be collected through an **online survey** and a **moderated discussion using an online interactive platform**.

—

Transition2BIO

Building on the most relevant communication and education EU funded projects and initiatives, Transition2BIO aims to promote the transition towards more sustainable production, consumption and lifestyle by implementing an integrated package of activities addressing a wide range of target stakeholders.

University of Eastern Finland (UEF)

With approximately 15,500 students and 2,700 members of staff, UEF is one of the largest universities in Finland. In addition, UEF is the most multidisciplinary university in Finland, offering teaching in nearly 100 major subjects and training experts for tomorrow’s changing labour market needs. Research carried out at UEF is of a high international standard. In the UEF research strategy, the identified global challenges are Environmental changes and sufficiency of natural resources; Ageing, lifestyles, and health; Learning in digitised society; and Cultural encounters, mobilities and borders.

Target audience

The organisers encourage the participation of EU funded projects in bioeconomy education, EU and local institutions, universities, policymakers, private companies, associations, teachers, students, and whoever may be interested in or have something to say about the future skills and related educational needs to build the future workforce of the European bioeconomy.

The workshop will be conducted in English.

Registration

Please register online for the workshop at this link:

<https://forms.office.com/r/2PaA3hZrJ8>

Participants will receive the link for the virtual meeting by email.

The deadline for the registration is 10th June 2022.
